

LIGHTSTIM ELIPSA LED LIGHT THERAPY

Elipsa by LightStim is a medical grade technology that uses multiple wavelengths of light simultaneously and continuously for a more comprehensive and result driven treatment. It features a patented technology called LightStim MultiWave, which helps optimize skin function in a healthy, natural, and non-invasive way. It is a stand-alone and touchless treatment that does not use UV light.

There are both immediate and long-term visible benefits when undergoing this LED therapy. There are two modes: Red, which is designed for wrinkle treatment, and blue, which is designed for acne treatment.

Procedure	Price
Face (Red and Blue LED at the same time)	Standalone price: \$75 Add-on price to other treatment \$50
Back (Blue LED)	Standalone price: \$80 Add-on price to other treatment \$45
